

Santiago Borrazás resumé

Last updated 2016-03-18

Santiago is a [full-stack web developer](#) specialising in creating web applications.

Goal

Create the best user experience to help people solve their problems.

Timeline

2015 - now

Working on an automated trading system.

I had the opportunity to gain experience in a backend programming position in a project. I help improve, maintain and administrate an automated trading system written in Java and Python. Occasionally drawing some charts using D3.

2013 - 2015

Worked @ [Ekumen](#) as web developer.

Worked for [Celery](#) implementing new features in the always-improving dashboard and checkout. Celery is a Y-Combinator backed startup that offers a platform for pre-orders.

2013 - now

Studying Computer Engineering @ Universidad Argentina de la Empresa (UADE).

2013 - 2013

Worked @ 55social as web developer.

Worked on the publishing module of the company's product: a social media platform for companies to generate content, interact with and analyze their audience. Developed new features and improved existing codebase. Debugged the back-end (a Java project with Spring, Hibernate as ORM and Freemarker as the templating engine). Daily scrum meetings, coding in JS, HTML and CSS.

2012 - 2013

Worked @ Despegar as web developer.

Despegar.com is the leading travel website in Latin America. Worked on the Auto section of the website. We worked implementing new features in the website using Javascript, HTML5 and CSS3.

2010 - 2012

Worked @ Globant as web developer.

Worked on an app for MySpace to demo how to use MySpace's Javascript API. Worked on various [JWT](#) internal apps, using JS, HTML and CSS and started with some new technologies as Backbone, Mustache, Node. Used agile methodologies: daily scrum, ticket system and bi-monthly planning meetings.

2010 - 2011

Studied Computer Engineering @ Universidad de Buenos Aires.

2008 - 2010

Freelancing @ Webs with love.

An incredible experience, working on a variety of projects: wrote my first game for a non-profit marketing consultant, a board-like game written in AS3; redesigned and rewrote an app to track stock in stores for a marketing agency in PHP using CodeIgniter framework. Designed websites using WordPress. Also maintained osCommerce, Drupal and Joomla websites. Learned how to manage projects, deal with clients, and market my services.

2006 - 2008

Worked @ W3 Comunicaciones as web developer.

Maintained Citibank's Latin American websites using HTML, CSS and JS. Successfully convinced the company to style only using CSS instead of tables. Several projects in Flash using AS2.

2000 - 2006

High School @ Fernando Fader, CENS.

Experience

Technical

Java - Python - Javascript (ECMAScript 5 and 6) - Javascript frameworks (Backbone, JQuery, YUI, Prototype) - HTML5 - CSS 2.1 and 3 - Semantic HTML - Social APIs (Twitter, Facebook, OAuth) - PHP - CMS/osCommerce (Magento, WordPress, Drupal) - SQL - ActionScript 3 - Git - Linux - Agile software development

Creative

Web design - UI design - Concept Art - Photography - Photoshop
